

## 退出登录

用户只需要向 Spring Security 项目中发送 `/logout` 退出请求即可。

### 退出登录

实现退出非常简单，只要在页面中添加 `/logout` 的超链接即可。

```
<a href="/logout">退出登录</a>
```

为了实现更好的效果，通常添加退出的配置。默认的退出 url 为 `/logout`，退出成功后跳转到 `/login?logout`

```
public final class LogoutConfigurer<H extends HttpSecurityBuilder<H>> extends
    AbstractHttpConfigurer<LogoutConfigurer<H>, H> {
    private List<LogoutHandler> logoutHandlers = new ArrayList<>();
    private SecurityContextLogoutHandler contextLogoutHandler = new SecurityContextLogoutHandler();
    private String logoutSuccessUrl = "/login?logout";
    private LogoutSuccessHandler logoutSuccessHandler;
    private String logoutUrl = "/logout";
    private RequestMatcher logoutRequestMatcher;
    private boolean permitAll;
    private boolean customLogoutSuccess;
```

如果不希望使用默认值，可以通过下面的方法进行修改。

```
http.logout()
    .logoutUrl("/logout")
    .logoutSuccessUrl("/login.html");
```
