

操作sorted set

sorted set是通过分数值来进行排序的，分数值越大，越靠后。

`zadd`:添加sorted set类型数据

`zrange`:获取sorted set类型数据

`zcard`:获取条数

`zrem`:删除数据

`zadd`需要将Float或者Double类型分数值参数，放置在值参数之前

```
127.0.0.1:6379> zadd score 7 zhangsan 3 lisi 5 wangwu 6 zhaoliu 2 tianqi
(integer) 5
127.0.0.1:6379> zrange score 0 4
1) "tianqi"
2) "lisi"
3) "wangwu"
4) "zhaoliu"
5) "zhangsan"
127.0.0.1:6379> zcard score
(integer) 5
127.0.0.1:6379> zrem score lisi
(integer) 1
```
