

运行3个redis进程

```
[root@localhost ~]# /usr/local/redis/bin/redis-server /opt/redis/conf/redis-6379.conf
[root@localhost ~]# /usr/local/redis/bin/redis-server /opt/redis/conf/redis-6380.conf
[root@localhost ~]# /usr/local/redis/bin/redis-server /opt/redis/conf/redis-6381.conf
[root@localhost ~]# ps -ef | grep redis
root      2784      1  0 18:11 ?        00:00:00 /usr/local/redis/bin/redis-server *:6379
root      2789      1  0 18:11 ?        00:00:00 /usr/local/redis/bin/redis-server *:6380
root      2794      1  0 18:11 ?        00:00:00 /usr/local/redis/bin/redis-server *:6381
root      2799    2209  0 18:11 pts/0    00:00:00 grep --color=auto redis
```

查看redis服务器主从状态

redis-6379

```
[root@localhost bin]# pwd
/usr/local/redis/bin
[root@localhost bin]# ./redis-cli -p 6379 -a root
Warning: Using a password with '-a' option on the command line interface may not be safe.
127.0.0.1:6379> info replication

```

redis-6380

redis-6381

在主服务器下添加数据 并测试从服务器数据是否正常显示

```
127.0.0.1:6380> get name
"shsxt"
```

从服务器只读，不允许写操作

```
127.0.0.1:6380> set name shsxt  
(error) READONLY You can't write against a read only slave.
```
